TITLE : SCREEN PLATEMAKING CLEANING DEVICE

ABSTRACT : PROBLEM TO BE SOLVED: To provide a screen platemaking cleaning device which can efficiently clean a screen platemaking used for screen printing and in which a waste is suppressed to a small value.

SOLUTION: The screen platemaking 52 is relatively moved by a pressing member 56 in a state in which a wiping sheet 54 is pressed to an opposed surface 52p of the platemaking 52 under a uniform pressure, thereby removing a stain adhered to the surface 52p opposed to a matter 62 in the platemaking 52. The sheet 54 is wound on a winding roller 58, and cleaned by a new wiping sheet 54, and hence the stain is efficiently removed. Further, the sheet 54 is partly pressed to the platemaking 52 by the member 56 to adhere the stain to the platemaking 52, and hence a waste generated by the cleaning can be suppressed to a small value.
